Chlorido(10,11,12,13-tetrahydro-4,5,9,14-tetraazabenzotriphenylene-²N⁴,⁵N⁵)copper(I)

J. Hong, X.-Y. Li and S. W. Ng

Abstract: The Cu^I atom in the title compound, [CuCl(C₁₈H₁₄N₄)], is *N,N'*-chelated by the *N*-heterocyclic ligand and coordinated by one Cl⁻ anion in a distorted trigonal geometry. In the crystal, the Cu^I atom is disordered over two positions in a 0.667 (6):0.333 (6) ratio. The deviation of the Cu atom from the N/N/Cl coordination plane is 0.013 (3) Å for the major component and 0.073 (6) Å for the minor component. Two methylene C atoms are also disordered over two positions in a 0.667 (6):0.333 (6) ratio.
